DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 1, line 3, "said antenna" is changed to --said antenna system--.

In claim 14, line 2, "a plurality of RF horn antennas" is changed to --a plurality of feed horns--.

In claim 20, lines 1-2, "said phase compensating corrugations" is changed to --said phase compensating corrugation--.

In claim 27, line 2, "a plurality of RF horn antennas" is changed to --a plurality of feed horns--.

Allowable Subject Matter

2. Claims 1-38 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The primary reason for the allowance of claims 1-13 is the inclusion of the limitation of a second one of the horns installed coaxial within the first one of the horns and separated from the vertex on the boresight axis by a second gap, the second horn configured for producing a radiation pattern illuminating the sub-reflector on a second frequency band spectrally offset from the first frequency band. It is this limitation found

in each of the claims, as it is claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

The primary reason for the allowance of claims 14-26 is the inclusion of the limitation of a second one of the horns positioned coaxially within the first horn, the second horn configured for operating at least at a second one of the frequency bands. It is this limitation found in each of the claims, as it is claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

The primary reason for the allowance of claims 27-38 is the inclusion of the limitation of a second one of the horns positioned coaxially within the first one of the horns along the boresight axis, the second horn configured for operating at least at a second one of the frequency bands. It is this limitation found in each of the claims, as it is claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

Kildal (U.S. Patent No. 6,137,449) teaches the feed consists of a waveguide tube, a dielectric joint and a sub-reflector; a ring focus reflector to improve the gain of antenna; corrugations or other similar means around the rim or the reflector in order to reduce far-out sidelobes; and dual-band operation by means of a coaxial waveguide outside the circular waveguide in the tube. However, Kildal does not disclose or suggest a second one of the horns installed coaxially within the first one of the horns.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
